

PVT Sampling Containers

Fluid Sampling

The Leutert PVT Sampling Containers are the ideal environment to prepare the Leutert bottomhole samplers for the job and to transfer the samples after retrieval from the well.

Description

Leutert PVT Sampling Containers are ideal for international transport as they offer the flexibility of standard intermodal transport by sea, rail and truck. Our mobile containers are easily moved anywhere in the world and, as they are designed to maximize space while maintaining the capacity to fully integrate any piece of sampling equipment. They also serve the home base, adding functionality when not deployed to field sites and are also ideal for use in training programs.

The Leutert PVT Sampling Containers are available in several sizes (20', 40', etc.) and can serve as mobile solution when deployed with a flatbed truck. Leutert offers a customized configuration to meet our customers' project requirements. Typical containerized units are fully self-contained and include all necessary compressed air, lighting, N2 supply and ventilation systems. The containers are fully insulated suitable for operation in all extremes of climatic conditions.

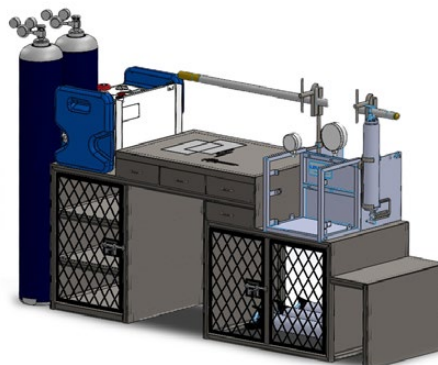

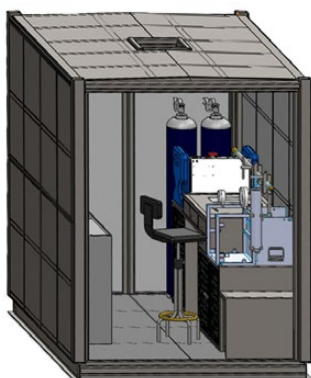

Leutert custom-built mobile workstations offer following benefits:

- Complete sampling equipment and accessories - specifically matched to customers' needs.
- Independent, standing, self-sufficient workstation for use even in the most demanding conditions.
- Possibility of immediate transport via land, water, or air.
