

Training

Surface and Bottom Hole PVT Sampling

Fluid Sampling

For people with petroleum engineering background who are new to PVT bottom hole and surface sampling or want to refresh, practice and improve their skills. After successful participation you will be able to take representative reservoir samples.

Training course for PVT sampling

Leutert offers in-house and off-site training for petroleum engineers and technicians who want to operate and maintain surface and bottom hole sampling equipment. In addition, you will get a basic introduction into fluid behaviour and PVT analysis.

After participating a five days training course you will get a certificate, which proves your capability of taking representative reservoir oil and gas samples.

Training program

- Introduction to sampling
- Surface sampling training section
- Introduction to bottom hole sampling (cased hole)
- Bottom hole sampling training section (cased hole)
- One phase sampler training section
- Pressure operation
- Fluid behavior
- Wellsite analysis
- Waxes, asphaltenes & hydrates
- PVT analysis
